DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 1, the claim fails to define the location of a sensor device associated with the bearing device and the location of a control associated with the housing. Furthermore, it is not clear as how the control the bearing device on the basis of the processed signals.

The remaining claims depend on claim 1 and therefore are rejected

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sekiguchi et al. (US 6,366,039) in view of Hiromasa et al. (JP Pub. 11-101233).

With respect to claims 1-2, Sekiguchi et al. show in Fig. 2 an electric discharge gas laser comprising a housing 1, a rotating fan 3 having a rotating shaft 4, a bearing device 8 operable to magnetically support the rotating shaft in a floating condition and including a sensor device 11, and a control 30 separated from the bearing device. Sekiguchi et al. do not disclose a signal processor. Whereas Hiromasa et al. teach a signal processor 80 (control part 80). For the benefit of processing the signal, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Sekiguchi et al. a signal processor as taught by Hiromasa et al.

With respect to claim 3, Hiromasa et al. disclose the signal processor including a control circuit 85 and an amplifier 86.

Citation of The Pertinent References

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: US 5848089, 6532246, 6535539, 6539043.
